Work Experience

Erste Digital (George); Vienna, Austria – Platform Engineer

MAY 2023 - PRESENT

- Managed and maintained large-scale AWS infrastructure across 50+ environments through Infrastructure as Code (IaC) practices for a digital banking platform serving more than 11 million customers in 7 countries
- Designed and implemented the migration of Jenkins infrastructure from on-premises servers to AWS, achieving up to 5x faster CI/CD pipeline performance across workloads
- Designed and implemented the migration from AWS CloudFormation to Terraform, redesigning infrastructure as code into reusable modules to improve scalability, consistency, and maintainability
- Architected and implemented an automation mechanism that eliminated manual intervention in the release workflow, enabling fully automated deployments and handover of release ownership to the Operations team
- Developed a custom Helm chart caching strategy for application deployment workflows, reducing pipeline execution time from 12 to 4 minutes and improving developer experience through faster feedback cycles
- Designed and implemented private connectivity between Jenkins and Amazon EKS clusters across multiple AWS accounts, enabling secure cross-account deployments without exposing Kubernetes API endpoints

Sotoon (CafeBazaar Cloud); Tehran, Iran – Site Reliability Engineer (SRE)

OCT 2019 - MAR 2023

- Built a platform to transfer, store, and analyze big data at petabyte scale for multiple user-facing applications with more than 110 million active users across Android, iOS, and Web
- Developed Kubernetes operators to manage Apache {Kafka, Hadoop, ZooKeeper} clusters in a Platform-as-a-Service (PaaS) environment to reduce cluster creation and maintenance costs
- Designed and developed a highly-available Wireguard and BGP-based VPN solution with 99.9% uptime
- Maintained Apache {Druid, Kafka, Hadoop HDFS, Hadoop YARN, Spark, ZooKeeper} and Elastic Stack (ELK) clusters/services in an on-premise environment with 99.9% availability
- Set up and maintained Monitoring and Alerting stack (Prometheus, Alertmanager, Grafana, and M3DB as long-term storage) and defined and tuned symptom-based alerts to reduce false alarms by 70%
- Created mentorship documents and mentored new team members

Education

Sharif University of Technology; Tehran, Iran – B.S. in Computer Science

SEP 2017 - JUN 2022

- GPA: 3.6 / 4.0
- Coursework: Computer Networks, Data and Network Security, Distributed Systems, Data Engineering and Big Data, Database Systems, Web Programming, Compiler, Computer Vision and Machine Learning

Skills

- **Proficient in** Kubernetes, AWS, Jenkins, Terraform, Prometheus, Helm, Elastic Stack (ELK), Python, Linux
- **Experienced with** Argo CD, Apache {Kafka, Druid, Hadoop}, GoLang, Java, PostgreSQL, Ansible

Languages

- English: Advanced; Farsi/Persian: Native
